PROFESSIONAL SUMMARY

BSIT graduate transitioning into Machine Learning / AI Engineering, with hands-on experience building and deploying computer vision and NLP-based systems. Completed Supervised Machine Learning: Regression and Classification, Deep learning, Artificial Neural Networks and Responsible AI and also hold a Microsoft Azure AI Fundamentals certification. Led development of MediLens, a real-time pill-detection and medication-adherence app, and independently built and deployed a production-style movie recommendation system with FastAPI and Docker. Software engineering background in full-stack (MERN) development supports building complete, deployable ML-powered applications. Seeking an entry-level Machine Learning / AI Engineer role.

TECHNICAL SKILLS

Machine Learning: Supervised Learning (Regression & Classification), Model Evaluation (F1, AUC-ROC), Model Explainability (LIME)

Computer Vision / Deep Learning: PyTorch, YOLOv11, Ultralytics, OpenCV, TensorFlow, OCR

NLP & Applied GenAI: Named Entity Recognition, Prompt Engineering, Gemini API

Programming Languages: Python, JavaScript (ES6+), C++, PHP

Data & Databases: MongoDB, MySQL, Oracle DB

ML Deployment & Tools: FastAPI, Docker, Git/GitHub, Postman, AWS

Software Engineering: REST APIs, MERN (React.js, Node.js), Laravel, OOP, DSA, DBMS, Computer Networks

PROJECTS

MediLens: AI-Powered Pill Detection & Medication Assistance System

Team Lead & AI Engineer

- Built a real-time pill detection system using a custom-trained YOLOv11 model, integrated into a Kotlin/Android application
- Built a prescription-scanning pipeline combining Donut OCR and Gemini API-based Named Entity Recognition to automatically extract medication details
- Designed a reminder and caregiver-alert system that persists across device reboots; advanced to the next round of the NIC Lahore AI Wrapper Competition

Movie Recommendation System

- Built a collaborative-filtering (ALS) and ranking-based recommender evaluated with Precision@K, Recall@K, and NDCG@K
- Developed a FastAPI backend with cold-start handling, containerized with Docker, and deployed live with a public demo
- Diagnosed and fixed a production out-of-memory issue by optimizing data structures, cutting memory use.

Credit Card Fraud Detection using Machine Learning

- Trained and compared an ensemble of eight classification models, including Logistic Regression and Random Forest
- Achieved best accuracy by using different models with model explainability via LIME

WORK EXPERIENCE

DeveloperHub Corporation — Full Stack Developer Intern (MERN)

Remote | Jan–Feb 2026

- Developed a MERN-based web application using React.js, Node.js, Express, and MongoDB
- Implemented REST APIs and authentication features to support secure, scalable application workflows

Kivro Solutions — Full Stack Developer Intern (MERN)

Remote | Nov–Dec 2025

- Built responsive user interfaces using React.js and structured MongoDB collections for scalable applications
- Developed backend logic supporting core application data flows

EDUCATION

Bachelor of Science in Information Technology (BSIT)

Nov 2022 – Jun 2026

University of Sargodha

CERTIFICATIONS

Supervised Machine Learning: Regression and Classification — Aug 2026

DeepLearning.AI & Stanford Online (Coursera)

Microsoft Azure AI Fundamentals

May 2026

LEADERSHIP & VOLUNTEERING

General Secretary, Event Management Society — University of Sargodha

Mar 2023 – Oct 2024

- Led planning and execution of departmental academic and co-curricular events
